Choice of Pen

This year MANSW decided to have a pen that combines a pen with a stylus. The stylus can be used with touch screens.

This first pen has a click action where the pen extends through the stylus. MANSW rejected this design as it was felt that someone may forget and start using the pen tip on their touch screen device.

This second style has the stylus on the opposite end. This is a much safer design. You need to twist the pen in order to extend the pen tip.
